Subject: GLYPHOSATE NSRL
Date: Friday, June 02, 2017 3:56:40 PM

I request that the Prop 65 NSRL (No Significant Risk Level) for glyphosate must be a validly arrived at NSRL, per CA regulations, substantially lower than the proposed 1100 micrograms per day, in order for this Safe Harbor to actually be safe to Californians. Until a comprehensive independent study is done, showing real life exposure levels, regulatory authorities should use a NSRL of well below 0.0001 micrograms/day, (Thongprakaisang et al., 2013), the level where breast cancer has been detected, in keeping with The Precautionary Principle.

It is astonishing that the Cal/EPA would even consider that 1100 mcg./day is an acceptable limit - it should be zero!

This is a very toxic herbicide - carcinogen, endocrine disrupter - it has contaminated our soil, food, water and bodies.

Please stand up to the Biotech/chemical industry! To be a strong people we need a healthy environment!

Sincerely,

Susan Stewart
Westlake Village, CA
